s will speak on "Lake Paddler that was."

July 25th A film night.

August 29th A members' night.

WALKS PROGRAMME FROM JULY TO SEPTEMBER

Saturday 5th July, 1980.

Grose River via Grose Road, (Faulconbridge Ridge). Cars meet in front of Springwood High School, cars turn off Main Highway at Faulconbridge Primary School and proceed along Grose Road turn left at High School (do not follow Chapman Parade). Meet at 10a.m. This walk is rated medium hard but those who do not wish to tackle the track to Grose River may by going a further kilometre along the main road, spend an interesting day at the superb lookout overlooking the Grose Valley and taking short strolls along the escarpment.

Saturday 2nd August, 1980.

Glenbrook Creek via Martins Point, returning via Wiggins Track. Cars meet at commencement of Burns Road, Springwood adjacent to Public School. At 10a.m. (It will be necessary to arrange two or three cars to be left at the top of Wiggins Track to convey drivers back to Martins Point). Walk medium to easy.

Saturday 6th September, 1980.

Glenbrook National Park

Cars meet on southern side of Woodford Station at 10a.m. near Railway Station, thence by road to the National Park, a stop will be made at Tobys Glen lunch probably at "The Oaks Picnic Ground" then to Woody Pear Dam 7 other parts of the park. The object of this safari will be to observe early spring flowers in various parts of the park. People feeling like a longer walk could visit "Red Hands Cave" and follow the walk from there down to the causeway, meeting drivers at the causeway.

N.B. The Katoomba and District Conservation Wildlife Society always walks - wet or fine. Frequently the rambles taken during mist or rain prove to be most enjoyable, adding a completely new dimension to a walk which might otherwise be mundane or stale. So don't think, "that nobody will turn up!-" they always do. I'm not sure if its a convention or a habit!

FROM OUR LAND USE COMMITTEE

WORLD CONSERVATION STRATEGY IN THE BLUE MOUNTAINS

We were pleased to read in the very informative March Newsletter the item in regard to the International Union for the Conservation of Nature and Natural Resources, and its formulation of the necessity for the mutual dependence of conservation and sustainable development, and its World Conservation Strategy priority programme; which, of course, includes the Blue Mountains.

WHAT is being done to APPLY THIS PROGRAMME to our Blue Mountains Region?

POINT (3) of the programme is very relevant here: "the principal goal for forests and pastures should be protection of the watershed. Fragile or critical areas, especially the steep slopes and the source areas of major rivers should never be cleared."

The City of Blue Mountains is strung along a forested watershed which is not only the source of its own local streams and waterfalls but also, via the Grose River and tributaries to the Warragamba and Nepean Rivers, a major source area for the Hawkesbury River. Certainly it consists of "fragile and critical areas", hastening of the process of erosion and alteration of the ecology of our sandstone plateau by new factors, such as uncontrolled, or unwisely controlled population increase with its many consequences, will alter its' vegetation, natural habitats and (very importantly) its hydrology. Not only will it become more like any other suburban area, also less attractive for the tourists who seek its distinctive features, but the Hawkesbury catchment area will be damaged.

POINT (5) is applicable too: "Environmental planning to integrate conservation and development." What, and Who, influences the planners?

THERE is WORK WAITING for EVERY MEMBER of our Society: to study and understand our sandstone region and the things that threaten it, and what should and can be done to conserve its natural resources.

Our Society's LAND USE Planning Committee, formed in 1973 has made several submissions to various authorities, and summaries and guidelines for publication in our Newsletter (the last being in No. 32, May 1978). They need to be followed up towards implementation! What should members do?

Our LAND PRESERVATION Fund Committee is endeavouring to raise money to acquire for preservation key environmentally "fragile and critical" areas of land. How many hectares will members' efforts help it preserve?

"Environmental planning for future activities in the Hawkesbury basin is probably of greater importance than for any other river basin in N.S.W., and possibly in Australia." (From a report commissioned for the Minister for Environment Control)

We LIKED the quotation at the head of the March Newsletter, and think it is worth using again, to keep its message in mind, perhaps in the first Newsletter each year.

"---- to all who find Nature not an adversary to conquer and destroy, but a store house of infinite knowledge and experience linking man to all things past and present" W. A. Jones.

#### REPORTS ON WALKS TAKEN DURING APRIL & MAY

The first Saturday in April was a beautiful day and a large crowd arrived at Blackheath, to visit Baltzers Lookout and the famous Hanging Rock - no not the one in Victoria, made famous in a recent film. The drive out wasn't improved by the noisome Blackheath Garbage Dump, but after about a mile improved and was negotiated by most cars quite easily being only about 5 kilometres. The lookout has splendid panoramic views of the greater part of the Grose River valley. A short but steep scramble N.W. along the edge of the cliff brought the party to the "hanging rock", an unusual formation, which looks as if it could crash into the valley at any moment, a few brave ones, lead by a lady who shall remain unnamed; leapt over the dividing chasm and explored the top of the rock. This gave those watching quite a thrill but nevertheless everybody felt happier when they were safely back on the main cliff. A number of folk tried to find a way down into Crayfish Creek to the West, however this was impossible owing to sheer cliffs. The area is quite lovely with some fantastic rock formations and some fine alpine heath with many species of flora favouring this type of situation. Birds were plentiful and most of the party had a splendid view of a wedge-tailed eagle which was soaring with extreme grace on the up draughts looking for prey. It is a great pity that this beautiful and largest bird of prey in Australia, has been so decimated, under the mistaken impression that they preyed on baby lambs. Few flowers were observed apart from a few hardy species epacris etc. Superb weather for a superb outing.

The first Saturday in May wasn't so good, with misty showers, but despite this 19 folk turned up, well rugged and waterproofed for the damp walk to Pulpit Rock, down the Little Ziz Zaz and along the recently re-opened path to Rienits Pass, Wilsons Glen etc. The drifting mist gave magnificent views into the Kedumba Valley and of towering cliffs with an ethereal effect rarely seen. The lower part of the track was dotted with enormous mountain ash trees (E. Oriades) and some fine turpentines (Syncarpia) ferns, lichens and mosses and birds made the walk interesting. Lunch was eaten under the cliffs of Rienits Pass. Many plants of the orchid *Rimacola elliptica* and monotypic genus which usually flowers in summer, flowers are interesting being green shading to yellowish, the plants always grow in crevices in sandstone cliffs favouring minute seams of clay, a reasonably common orchid but rarely seen because of its perfect affinity with its habitat. A very enjoyable day indeed.

SOUTH WEST TASMANIA - A WILDERNESS IN QUESTION

FILM NIGHT.

Eighty people came to see the film at Wentworth Falls. From questions, discussion and comments it obviously stirred the concern and need to preserve this magnificent wilderness area. Two short films made and kindly loaned by Jim Haron rounded off the program. Gross takings were \$130.00, only expenses being hire of hall and printing. The balance will assist the South West Tasmania Committee in its tireless campaign.

Other showings of the film in the Blue Mountains were at Katoomba and Springwood High Schools, N.P.&W. Service, and the Lower Mountains Conservation Society.

We are grateful to Dave Kelly for speaking and all who helped in the showings of the film.

RECENT DEVELOPMENTS.

The urgency in saving the South West Tasmanian Wilderness is stressed by moves in the Tasmanian Parliament recently:-

1. They have abandoned plans to have a joint select committee of Parliament inquire into the proposed flooding of the Lower Gordon and other power alternatives. The final decision on the next major power scheme will now be made by the Government alone, in about July.

2. The Forestry Amendment Bill is now before the Government. If passed this will transfer management authority of State Forests in Conservation Areas from the National Parks & Wildlife Service to the Forestry Commission. This could not then be altered without permission of the Commission or the timber companies. Not even the Minister of Forests would be able to intervene to stop the companies from extracting every tree in their concession areas. About 30% of the Tasmanian Wilderness would be lost if the concessions were fully exploited.

Our Society has sent a letter of protest against the above. I appeal to all individual members who have not yet done so to express their objections by sending a post card (obtainable from the Hut) or, preferably, by writing to the Premier of Tasmania.

The International Union for Conservation of Nature and Natural Resources considers South West Tasmania to be one of the world's three largest temperate wilderness areas. Its Director General has pleaded with the Premier to gazette the whole area as a National Park.

INGAR PLANT REGENERATION STUDY

It is now over two years since wild fire swept through the study area in December, 1977.

After consulting NPWS Naturalist Ranger, Ann Jelinek, it has been decided to record progress annually in future. This means the next plant count will be in November.

GARAGE SALE

This will be held in aid of the KDWCS Land Preservation Fund at 23 Edward Parade, Wentworth Falls, on Saturday, 19th July, 10a.m. - 3p.m.

Anything suitable for sale will be most gratefully accepted. Goods may be left at the above address from Thursday, 17th July, or 'phone Winsome Gregory (571573).

ATTEMPT TO SAVE LAND

At the May general meeting of the Society it was confirmed that Portions II and I2 bordering Jamison Creek, Wentworth Falls, met the environmental requirements for acquisition under our land preservation scheme. (The Society's Land Preservation Fund was set up to secure preservation, by purchase and dedication as Reserve through the Blue Mountains City Council, of some endangered environmentally sensitive land on the Blue Mountains.

Portion I2 may have been sold already, but the new owner could perhaps be prepared to resell the whole or part of it.

Portion II is owned by the Margery Anderson Estate. Through its senior executor, Mr. J. Anderson, the Society has been given three months' option to purchase (till 27.7.80) He would like the land to become Reserve. The price of \$22,000 includes deductions for a) the area being called "Margery Anderson Memorial" and b) waiving of a right of way through Por. I2.

Members are urged to visit this beautiful area (see plan). It abounds with birdlife and a wide variety of native plants. The easiest way to find it is to walk down the track to the Wentworth Falls and follow the signs to Weeping Rock. From Weeping Rock walk upstream about 200 ft. till you see an old post and wire fence partly obscured by undergrowth on the left. This is the southern boundary of Por. II. Follow the track up the creek. The northern boundary is marked by an old concrete post near a low waterfall, below which is a wide sandy creek bed. Portion I2 adjoins to the north. To the west the land extends to just beyond the treeline of the swamps.

#### Reasons for need for Reservation

1) Ecological and Hydrological: As the swamplands of the Jamison Creek immediately above the Falls contribute significantly to the flows of water over the Falls, the Society fears that development of any kind in this fragile terrain, particularly interference with the drainage, could result in the destruction of the catchment for the Falls and subsequent diminution of flow.

This view is confirmed by National Parks and Wildlife Service (BMCC Business Paper 21.8.78); BMCC (Environmental Inventory, Feb. 1980); Jim Smith B.Sc. Dip. Ed., Lecturer in Ecology Sydney Technical College (Jamieson Creek Survey, Feb 1980).

2) Historical Importance: Attractiveness of the Jamison Creek valley has been acclaimed since first seen by the Three Explorers in 1813. Charles Darwin recorded walking along a pathway through the valley to the Falls in 1836. This was first track used by sightseers on the Blue Mountains, and Jamison Valley creek was the earliest named stream.

3) Proposed Community Project. Following a request from the Wentworth Falls Reserve 530a Committee, BMCC has given approval for the re-opening of this pathway subject to consent of owners of private land through which the track would run - Portions II and I2. These two blocks prevent the Reserve extending from the Great Western Highway to the Falls. Some Blue Mountains Grammar School boys are eager to undertake this work with help from other members of the community.

#### HISTORY OF CONCERN, AND ACTION, TO DATE BY THE SOCIETY.

Since 1974 this Society has been stating its concern about the Jamison Creek Valley in submissions to various authorities. It considers that the whole area is of ecological, historical and scenic importance, being virtually part of a State tourist attraction containing the Wentworth Falls and Weeping Rock.

At present we are waiting for the Minister for Planning and Environment to receive a deputation from the Society. It will stress the importance of this land and the need for urgent action by the Minister.

The Society is seeking direct purchase by the State Government or funding to cover both portions; failing that, part funding. This could involve the Society in raising the remainder.

The Society's Land Preservation Fund stands at \$2774 which (subject to member's approval at the July general meeting, see proxy form) could be used through BMCC towards purchase and dedication as Reserve.

In addition, recognition of the importance of saving Portion II has led concerned citizens and members to promise donations amounting to nearly \$9,000 towards its purchase.

Until the Government's intention and the legal position are clarified no money is being accepted, however the Land Preservation Fund Committee would be grateful for other promises of financial help should the need arise. Please phone the Society's Treasurer, Mrs. Betty West (57 1285) or the LPFC Convener, Winsome Gregory (57 1573).

The goal is a big one for the Society and members' wholehearted support is sought.

There's Many a Slip 'Twixt Cup and Lip

It's instinctive patterns of behaviour have enabled the animal and its species to survive, therefore glimmerings of intelligence have a hard task to make any impact. (After all, do humans do much better in their complex world, where intelligence has become necessary for survival!) Currawongs have been able to adapt to the intrusion of my house and myself into their territory; they show inquisitiveness, learning, innovative behaviour----but instinct wins.

A parent Currawong brought its fledgling along to meet my verandah and my tucker; compliantly, I threw a nourishing morsel. Parent collected it and had started to poke it into junior's open, waiting mouth when, out of the corner of its eye, it saw other Currawongs approaching. Instead of quickly completing the feeding Senior withdrew its beak, dropped the food and dashed off some distance to chase the others; leaving Junior's mouth open -- and empty! Of course, another Currawong made a smart raid and snapped up the morsel, and when parent returned there was nothing to put into that squawking open mouth! A silly act? I've noticed that response to danger (real or imagined) takes priority over feeding, but in this case no time would have been lost by releasing the food in Junior's mouth (or swallowing it himself). The instinct of protective aggression was just too strong and blinding; it immediately inhibited the nurturing instinct, and left no room for glimmers of intelligence.

Birds are interesting to watch, and probably the easiest form of wildlife to observe from one's own verandah. There seem to be fewer honeyeaters now, why? Drier times, reduction of understory,---? Beryl Cooley.

(Editors note; It may well be that the birds are just in another place. There is an enormous flow of nectar this year from the Banksias and earlier, Lambertia Formosa the 'Honey Flower' and birds congregate in large numbers on sheltered sunny slopes. At bottom of Laura is Olympian Rock close to road and here large numbers of Yellow Winged, Yellow Faced Honey Eaters with Eastern Spinebills and large flocks of Wattle Birds can be seen. The usual vast migration from Victoria to Queensland went through earlier and also large numbers of Spotted and Striated Pardalotes travelling together. Seem to be increased numbers of aptly named Origma Solitaria the Rock Warbler hopping about tracks and rocks eating tiny ants? Usually seen as odd pair on suitable rock it is difficult to see how their numbers could jump. This small bird looking like a pilot bird builds an enormous nest in a dark cleft or cave and I would have thought would suffer predation by bush rats etc. The whitish throat is way to tell them from pilot bird and they are a most lovable and friendly little bird who has at times eaten crumbs off my boots.)

CORRECTION: The President referred to a statement at the previous meeting implying that there was \$2000 available from Hut repairs. This was incorrect. There was in fact only \$1300 in the general and No. 2 account. The account was not for repairs or renewal of the Hut but was available for a variety of purposes.

(Editor's note; The figure at 20th June for the two accounts was \$1559 plus of course another \$1700 available if required from our Interest Bearing Deposit account; a total of \$3259 available for conservation projects. A staggering sum compared to our earlier days. John Hibberd, that fine conservationist and ex-chairman of the N.C.C., pointed out we are one of only two Societies that have the use of premises to raise money. The W.A. Naturalist Society have over the years purchased the Naturalist Hall there. John also pointed out how our donations ranging from \$50 to \$200 have been used to such good effect to pay printing costs etc. by such notable fighters as the Fraser Island Defence Committee, the Myal Lakes Defence Committee and the latest complete victory The Project Jonah. Our members can be very proud of their part in these things and I think of one of these marvellous monsters with their as yet little understood communications system wallowing along in peace because of our contribution with a wish that I could say to him or her in that strange singing language "I am your friend and may you live forever."

We are very fortunate that we have never had any parochial views in our Society and I feel sure that our members realise a defeat for conservation anywhere is a defeat for all conservationists. This Editors Note seems to have developed into an essay so I'll close by saying we will have to spend some of the enormous affection given to our pets on the wilderness and the creatures of the wild if we wish them to remain part of our lives.

APOLOGY: Sorry, our Annual Report is still at the printers and will have to follow later. Under the circumstances, below is an application for renewal of membership to send in with your proxy form. Rates are; Family \$4.00 Single \$3.00 and pensioner or junior \$1.00.

Enclosed please find \$ \_\_\_\_\_ for Membership renewal.

\_\_\_\_\_  
Name

\_\_\_\_\_  
Address

The amendment of our Constitution is set out in convenient form to cut out and paste on page 8 of your Constitution Book.

Amendment to (I2)

The Management Committee shall set the day and time of monthly meetings from year to year.

In the text of the book, Rule I2, please alter Thursday to Friday.

VOTING ON USE OF LAND PRESERVATION FUND

N.B. For details of the land under consideration please see pages 3, 4 and 5.

VOTING ARRANGEMENTS

"That due notice be given of any resolution that would commit the Society to expenditure, allocation or distribution of funds for the purchase of land. That such notice be in writing, submitted to the Secretary and circulated in an edition of the newsletter not less than 14 days before the meeting at which it will be proposed. That such circular advise members unable to attend that meeting that they may exercise a proxy vote."

(On 16.6.80 the Land Preservation Fund had a credit balance of \$2774. In addition to this sum, a total of approximately \$9000 has been promised to the Fund specifically and solely for Portion II. Between 16th June and 25th July it is roughly estimated that a further \$300 may have been collected and credited to the LPP). The purchase price of Portion II is approximately \$22,000 and Portion I2 is expected to be in proportion.

In pursuance of this resolution members are now being invited to vote, in person or by proxy (see form below), at the Society's monthly general meeting on 25.7.80. Proxy/referendum forms received by the Secretary after 24th July, 1980 will be regarded as void and of no effect.

The following is the resolution (moved by the President, G. Blackwell, and seconded by Vice-President T. Macartney):-

"That all money in the Land Preservation Fund at the date of purchase be available towards the purchase of Portion II or Portion I2 or both."

PROXY/REFERENDUM FORM

Katoomba & Dist. Wildlife Conservation Society, for general monthly meeting on 25th July, 1980.

CHOICE A

As I wish not be attending the general meeting, I wish to nominate..... as my proxy and authorise him/her to cast my vote in his/her own discretion.

CHOICE B

I wish to vote direct without proxy in this matter and my vote is recorded hereunder:-

Yes .....  
No .....  
(Please tick on appropriate line)

FULL NAME (Please Print).....

SIGNATURE .....

DATE .....

Please cut this form at the dotted line and post to:-

The Secretary, Katoomba & District Wildlife Conservation Society,  
P.O. Box 29,  
WENTWORTH FALLS: N.S.W. 2782.

## REPORTS ON WALKS TAKEN DURING APRIL & MAY

The first Saturday in April was a beautiful day and a large crowd arrived at Blackheath, to visit Baltzers Lookout and the famous Hanging Rock – no not the one in Victoria, made famous in a recent film. The drive out wasn't improved by the noisome Blackheath Garbage Dump, but after about a mile improved and was negotiated by most cars quite easily being only about 5 kilometres. The lookout has splendid panoramic views of the greater part of the Grose Valley. A short but steep scramble NW along the edge of the cliff brought the party to the "hanging rock", an unusual formation, which looks as if it could crash into the valley at any moment, a few brave ones, lead by a lady who shall remain unnamed; lept over the dividing chasm and explored the top of the rock. This gave those watching quite a thrill but nevertheless everybody felt happier when they were safely back on the main cliff. A number of folk tried to find a way down into Crayfish Creek to the West, however this was impossible owing to sheer cliffs. The area is quite lovely with some fantastic rock formations and some fine alpine heath with many species of flora favouring this type of situation. Birds were plentiful and most of the party had a splendid view of a wedge-tailed eagle which was soaring with extreme grace on the up draughts looking for prey. It is a great pity that this beautiful and largest bird of prey in Australia, has been so decimated, under the mistaken impression that they preyed on baby lambs. Few flowers were observed apart from a few hardy species epacris etc. Superb weather for a superb outing.

The first Saturday in May wasn't so good, with mist showers, but despite this 19 folk turned up, well rugged and waterproofed for the damp walk to Pulpit Rock, down the Little Ziz Zag and along the recently reopened path to Rienits Pass, Wilsons Glen etc. The drifting mist gave magnificent views into the Kedumba Valley and of towering cliffs with an ethereal effect rarely seen. The lower part of the track was dotted with enormous mountain ash trees (*Eucalyptus Oriades*) and some fine turpentines (*Syncarpia*) ferns, lichens and mosses and birds made the walk interesting. Lunch was eaten under the cliffs of Rienits Pass. Many plants of the orchid *Rimacola elliptica* and monotypic genus which usually flowers in summer, flowers are interesting being green shading to yellowish, the plants always grow in crevices in sandstone cliffs favouring minute seams of clay, a reasonably common orchid but rarely seen because of its perfect affinity with its habitat. A very enjoyable day indeed.

## SOUTH WEST TASMANIA – A WILDERNESS IN QUESTION FILM NIGHT

Eighty people came to see the film at Wentworth Falls. From questions, discussion and comments it obviously stirred the concern and need to preserve this magnificent wilderness area. Two short films made and kindly loaned by Jim Haron rounded off the program. Gross takings were \$130.00, only expenses being hire of hall and printing. The balance will assist the South West Tasmania Committee in its tireless campaign.

Other showings of the film in the Blue Mountains were at Katoomba and Springwood High Schools, National Parks & Wildlife Service, and the Lower Mountains Conservation Society.

We are grateful to Dave Kelly for speaking and all who helped in the showings of the film.

## RECENT DEVELOPMENTS

The urgency in saving the South West Tasmanian Wilderness is stressed by moves in the Tasmanian Parliament recently:-

1. They have abandoned plans to have a joint select committee of Parliament inquire into the proposed flooding of the Lower Gordon and other power alternatives. The final decision on the next major power scheme will be made by the Government alone, in about July.
2. The Forestry Amendment Bill is now before the Government. If passed this will transfer management authority of State Forests in Conservation Areas from the National Parks & Wildlife Service to the Forestry Commission. This could not then be altered without permission of the Commission or the timber companies. Not even the Minister of Forests would be able to intervene to stop the companies from extracting every tree in their concession areas. About 30% of the Tasmanian Wilderness would be lost if the concessions were fully exploited.

Our Society has sent a letter of protest against the above. I appeal to all individual members who have not yet done so to express their objections by sending a post card (obtainable from the Hut) or, preferably, by writing to the Premier of Tasmania.

The International Union for Conservation of Nature and Natural Resources considers South West Tasmania to be one of the worlds three largest temperate wilderness areas. It's Director General has pleaded with the Premier to gazette the whole area as a National Park.

## INGAR PLANT REGENERATION STUDY

It is now over two years since fire swept through the study area in December 1977.

After consulting NPWS Naturalist Ranger, Ann Jelinek, it has been decided to record progress annually in future. This means the next plant count will be in November.

## GARAGE SALE

This will be held in aid of the KDWCS Land Preservation Fund at 23 Edward Parade, Wentworth Falls, on Saturday, 19<sup>th</sup> July, 10am – 3pm.

Anything suitable for sale will be most gratefully accepted. Goods may be left at the above address from Thursday, 17<sup>th</sup> July, or phone Winsome Gregory (57 1573).

## ATTEMPT TO SAVE LAND

At the May general meeting of the Society it was confirmed that Portions 11 and 12 bordering Jamison Creek, Wentworth Falls, met the environmental requirements for acquisition under our land preservation scheme. (The Society's Land Preservation Fund was set up to secure preservation, by purchase and dedication as Reserve through the Blue Mountains City Council, of some endangered environmentally sensitive land on the Blue Mountains).

Portion 12 may have been sold already, but the new owner could perhaps be prepared to resell the whole or part of it.

Portion 11 is owned by the Margery Anderson Estate. Through its senior executor, Mr J. Anderson, the Society has been given three months option to purchase (till 27.7.80). He would like the land to become a Reserve. The price of \$22,000 includes deductions for a) the area being called "Margery Anderson Memorial" and b) waiving of a right of way through Portion 12.

Members are urged to visit this beautiful area (see plan). It abounds with birdlife and a wide variety of native plants. The easiest way to find it is to walk down the track to the Wentworth Falls and follow the signs to weeping Rock. From Weeping Rock walk upstream about 200 ft, till you see an old post and wire fence partly obscured by undergrowth on the left. This is the southern boundary of Por. 11. Follow the track up the creek. The northern boundary is marked by an old concrete post near a low waterfall, below which is a wide sandy creek bed. Portion 12 adjoins to the north. To the west the land extends to just beyond the treeline of the swamps.

### Reasons for need for Reservation

1) Ecological and Hydrological: As the swamplands of the Jamison Creek immediately above the Falls contribute significantly to the flows of water over the Falls, the Society fears that development of any kind in this fragile terrain, particularly interference with the drainage, could result in the destruction of the catchment for the Falls and subsequent diminution of flow. This view is confirmed by National Parks and Wildlife Service (BMCC Business Paper 21.8.78); BMCC (Environmental Inventory, Feb. 1980); Jim Smith B.Sc. Dip. Ed., Lecturer in Ecology Sydney Technical College (Jamison Creek Survey, Feb 1980).

2) Historical Importance: Attractiveness of the Jamison Creek Valley has been acclaimed since first seen by the Three Explorers in 1813. Charles Darwin recorded walking along a pathway through the valley to the Falls in 1836. This was the first track used by sightseers on the Blue Mountains, and Jamison Valley creek was the earliest named stream.

3) Proposed Community Project. Following a request from the Wentworth Falls Reserve 530a Committee, BMCC has given approval for the re-opening of this pathway subject to consent of owners of private land through which the track would run – Portions 11 and 12. These two blocks prevent the Reserve extending from the Great Western Hwy to the Falls. Some Blue Mountains Grammar School boys are eager to undertake this work with the help from other members of the community.

### HISTORY OF CONCERN, AND ACTION, TO DATE BY THE SOCIETY.

Since 1974 this Society has been stating its concern about the Jamison Creek Valley in submissions to various authorities. It considers that the whole area is of ecological, historical and scenic importance, being virtually part of a State tourist attraction containing the Wentworth Falls and Weeping Rock.

At present we are waiting for the Minister for Planning and Environment to receive a deputation from the Society. It will stress the importance of this land and the need for urgent action by the Minister.

The Society is seeking direct purchase by the State Government or funding to cover both portions; failing that, part funding. This could involve the Society in raising the remainder.

The Society's Land Preservation Fund stands at \$2774 which (subject to member's approval at the July General Meeting, see proxy form) could be used through BMCC towards purchase and dedication as Reserve.

In addition, recognition of the importance of saving Portion 11 has led concerned citizens and members to promise donations amounting to nearly \$9,000 towards its purchase.

Until the Government's intention and the legal position are clarified no money is being accepted, however the Land Preservation Fund Committee would be grateful for other promises of financial help should the need arise. Please phone the Society's Treasurer, Mrs Betty West (57 1285) or the LPFC Convener, Winsome Gregory (57 1573).

The goal is a big one for the Society and member's wholehearted support is sought.

### There's Many a Slip Twixt Cup and Lip.

It's instinctive patterns of behaviour have enabled the animal and its species to survive, therefore glimmerings of intelligence have a hard task to make impact. (After all, do humans do much better in their complex world, where intelligence has become necessary for survival!) Currawongs have been able to adapt to the intrusion of my house and myself into their territory; they show inquisitiveness, learning, innovative behaviour---but instinct wins.

A parent Currawong brought its fledgling along to meet my verandah and my tucker; compliantly, I threw a nourishing morsel. Parent collected it and had started to poke it into junior's open, waiting mouth when, out of the corner of its eye, it saw other Currawongs approaching. Instead of quickly completing the feeding Senior withdrew it's beak, dropped the food and dashed off some distance to chase the others; leaving Junior's mouth open and empty! Of course, another Currawong made a smart raid and snapped up the morsel, and when parent returned there was nothing to put into that squawking open mouth! A silly act? I've noticed that response to danger (real or imagined) takes priority over feeding, but in this case no time would have been lost by releasing the food in Junior's mouth (or swallowing it himself). The instinct of protective aggression was just too strong and blinding; it immediately inhibited the nurturing instinct, and left no room for glimmers of intelligence.

Birds are interesting to watch, and probably the easiest form of wildlife to observe from one's own verandah. There seem to be fewer honeyeaters now, why? Drier times, reduction of understory?...Beryl Cooley.

(Editors note; It may well be that the birds are just in another place. There is an enormous flow of nectar this year from the Banksias and earlier, Lambertia Formosa the 'Honey Flower' and birds congregate in large numbers on sheltered sunny slopes. At bottom of Leura is Olympian Rock close to road and here large numbers of Yellow Winged, Yellow Faced Honey Eaters with Eastern Spinebills and large flocks of Wattle Birds can be seen. The usual vast migration from Victoria to Queensland went through earlier and also large Spotted and Striated Pardalotes travelling together. Seem to be increased numbers of aptly named Origma Solitaria The Rock Warbler hopping about tracks and rocks eating tiny ants? Usually seen as odd pair on suitable rock it is difficult to see how their numbers could jump. This small bird looking like a pilot bird builds an enormous nest in a dark cleft or cave and I would have thought would suffer predation by bush rats etc..

The whitish throat is way to tell them from pilot bird and they are a most lovable and friendly little bird who has at times eaten crumbs off my boots.)

CORRECTION: The President referred to a statement at the previous meeting implying that there was \$2000 available from Hut repairs. This was incorrect. There was in fact only \$1300 in the general and No. 2 account. The account was not for repairs or renewal of the Hut but was available for a variety of purposes.

(Editors note; The figure at 20<sup>th</sup> June for the two accounts was \$1559 plus of course another \$1700 available if required from our Interest Bearing Deposit account; a total of \$3259 available for conservation projects. A staggering sum compared to our earlier days. John Hibberd, that fine conservationist and ex-chairman of the NCC, pointed out we are one of the only two Societies that have the use of premises to raise money. The WA Naturalist Society have over the years purchased the Naturalist Hall there. John also pointed out how our donations ranging from \$50 to \$200 have been used to such good effect to pay printing costs etc. by such notable fighters as the Fraser Island Defence Committee, the Myall Lakes Defence Committee and the latest complete victory The Project Jonah. Our members can be very proud of their part in these things and I think of one of these marvellous monsters with their as yet little understood communications system wallowing along in peace because of our contribution with a wish that I could say to him or her in that strange singing language "I am your friend and may you live forever."

We are very fortunate that we have never had any parochial views in our Society and I feel sure that our members realise a defeat for conservation anywhere is a defeat for all conservationists. This Editors Note seems to have developed into an essay so I'll close by saying we will have to spend some of the enormous affection given to our pets on the wilderness and the creatures of the wild if we wish them to remain part of our lives.

APOLOGY: Sorry, our Annual Report is still at the printers and will have to follow later. Under the circumstances, below is an application for renewal of membership to send in with your proxy form. Rates are; Family \$4.00 Single \$3.00 and Pensioner or Junior \$1.00.

Enclosed please find \$        for Membership renewal.

The amendment of our Constitution is set out in convenient form to cut out and paste on page 8 of your Constitution Book.

Amendment to (I2)

The Managment Committee shall set the day and time of monthly meetings from year to year.

In the text of the book, Rule I2, please alter Thursday to Friday.

N.B. For details of the land under consideration please see pages 3, 4 and 5.

VOTING ARRANGMENTS

“That due notice be given of any resolution that would commit the Society to expenditure, allocation or distribution of funds for the purchase of land. That such notice be in writing, submitted to the Secretary and circulated in an edition of the next newsletter not less than 14 days before the meeting at which it will be proposed. That such circular advise members unable to attend that meeting that they may exercise a proxy vote.”

(On 16.6.80 the Land Preservation Fund had a credit balance of \$2774. In addition to this sum, a total of approximately \$9000 has been promised to the Fund specifically and solely for Portion 11. Between 16<sup>th</sup> June and 25<sup>th</sup> July it is roughly estimated that a further \$300 may have been collected and credited to the LPF). The purchase price of Portion II is approximately \$22000 and Portion 12 is expected to be in proportion.

In pursuance of this resolution members are now being invited to vote, in person or by proxy (see form below), at the Society’s monthly general meeting on 25.7.80. Proxy/referendum forms received by the Secretary after 24<sup>th</sup> July, 1980 will be regarded as void and of no effect.

The following is the resolution (moved by the President, G Blackwell, and seconded by Vice President T. McCartney):-

“That all money in the Land Preservation Fund at the date of purchase be available towards the purchase of Portion 11 or Portion 12 or both.”

PROXY/REFERENDUM FORM

Katoomba & District Wildlife Conservation Society, for general monthly meeting on 25<sup>th</sup> July, 1980.

CHOICE A

As I will not be attending the general meeting. I wish to nominate.....as my proxy and authorise him/her to cast my vote in his/her own discretion.

-----

CHOICE B

I wish to vote direct without proxy in this matter and my vote is recorded hereunder:-

Yes.....

No.....

(Please tick on appropriate line)

FULL NAME (Please Print).....

SIGNATURE .....

DATE .....

-----

Please cut this form at the dotted line and post to:-

The Secretary, Katoomba & District Wildlife Conservation Society,  
PO Box 29,  
WENTWORTH FALLS NSW 2782
